Plasma Freezer

Temperature Range: : -30°C to -40°C

Plasma the most critical component of blood that is required to be stored at a temperature below -30°C. The Plasma Freezer from Newtronic has a sturdy body, excellent insulation and a high performance refrigeration unit that ensures the proper maintenance of temperature to protect your samples. It assures you a performance with high precision and adding value to your storage & research.

Designed with a sturdy body, the design team has given special attention to ease of operations. Thus you can spend more time on your research rather than spending time on managing the chamber.
